

The TMT Receptacle Cleaner tool was originally designed to remove marine growth from the hot stab receptacle on tree pod interface panel. The Receptacle Cleaner tool is created from stainless steel and Acetal in order to achieve maximum tool life.

The consumable cleaning brushes are made from carbon steel and abrasive impregnated plastic.

The drive motor is fitted with a check valve to prevent the tool from running in the wrong direction. The tool can be modified to suit customer requirements.

Features:

- Easy to install & remove
- Corrosion resistant materials
- ROV deployable

Specifications:
