

Engineered Tooling Solutions **FAST**

Buoyancy balls provide a simple solution for small installation buoyancy requirements.

A 45mm through-hole allows the buoyancy balls to be threaded onto a large diameter rope or a sling.

Multiple balls can be strung together to provide a greater uplift. The balls have a tough outer polymer shell which provides protection during transport, handling and operation.

TMT can also customise the buoyancy balls to suit your needs.

Features:

- Easy to use
- Different sizes available
- Corrosion resistant material
- Field proven

Specifications:

- | | |
|----------------|---------|
| • Size | 560mm |
| • Dry Weight | 77.6kg |
| • Uplift | 48.5kg |
| • Depth Rating | 1500msw |
